Fractal scanning path generation and control system for ... A fractal scanning path which is a FASS (space-filling, self-avoiding, simple and self-similar) curve is proposed for selective laser sintering (SLS). The authors' preliminary research has proved that the samples which are produced by SLS along a fractal scanning path possess improved physical performance. Fractal scanning path generation and control system for ... A fractal scanning path which is a FASS (space-filling, self-avoiding, simple and self-similar) curve is proposed for selective laser sintering (SLS). Fractal scanning path generation and control system for ... International Journal of Machine Tools & Manufacture 43 (2003) 293-300 Fractal scanning path generation and control system for selective laser sintering (SLS) J. Yang et al.

Research on fractal-scanning path for arbitrary boundary ... The fractal curve is proposed as a novel scanning-path used in Layered Manufacturing. Aiming at a limitation that the fractal curve can only fill a square region, a method is developed to realize the trimming of fractal curve in arbitrary boundary layer by means of judging intersection points. Research on Fractal-Scanning Path for Arbitrary Boundary ... ment the SLS process in "S" scanning path and fractal-scanning path. The materials to be sintered consist of the mixture of resin and sand powders. The experimental results show that under the same sintering efficiency, compared with the "S" scanning path, the Fractal scanning path generation and control ... - DeepDyve A fractal scanning path which is a FASS (space-filling, self-avoiding, simple and self-similar) curve is proposed for selective laser sintering (SLS). The authors' preliminary research has proved that the samples which are produced by SLS along a fractal scanning path possess improved physical performance.

Perfect patterns pave path to faster, cheaper MRI - phys.org Dr Shekhar Chandra from UQ's School of Information Technology and Electrical Engineering has identified a new class of fractals, a mathematical pattern that could boost the MRI scanning process. Hilbert Curve Fractal Stacking in the Application of Path ... The scanning process of fused deposition modeling is realizing the fill of certain region, Therefore, reasonable scanning path planning directly affects the forming efficiency and the precision of the work piece. The method of Hilbert curve fractal scanning path which basing on the characteristics of both partition and parallel scanning is put forward basing on the analysis of the existing. Automated Torch Path Planning Using Polygon Subdivision ... path may accumulate tremendous heat in the process of SFF based on welding and hence may lead to deformation of the part. A method suggested by Yang et al. (2002) is based on a fractal scanning path for laser sintering. This technique allows space filling, self-avoiding, and self-similar scanning. The.

Fractal scan strategies for selective laser melting of ... Through the use of fractal scan strategies, bulk density can be increased by $2 \pm 0.7\%$ when compared to the island scanning, demonstrating the potential of fractal scan strategies in the manufacture of typically unweldable nickel superalloys. Path planning of mechanical polishing process for freeform ... Based on this model, the material removal functions of scan line, Archimedean spiral, and Hilbert fractal polishing path are derived. The simulation results show that the Hilbert fractal polishing path has the best comprehensive performance. On Relationships Between Fixation Identification ... Wavelets and fractals; Keywords: Scan path comparison, Characterization and analysis, Pupil dynamics, Scanning strategies 1 Introduction Many natural phenomena exhibit fractal or self-similar properties. For example, in one of the earliest reports regarding the self-similarity of natural phenomena, Mandelbrot [1967] showed that.

Optimal Scanning of Gaussian and Fractal Brownian Images ... the adjacent sets of pixels. The second method deals with choice of scan direction by criterion of scalar product maximum of chosen vector and previous one. An estimator of correlation dimension is evaluated. Keywords: optimal scanning, correlation dimension, maximum likelihood estimator, fractal analysis, Gaussian and Fractal Brownian images.
